Peter Krieg

Senior Software Engineer | pkrieg2@gmail.com | 339-225-0673 | peterkrieg.com

Skills & Interests

- ***Skills*** React, Typescript, Javascript, Node.js, HTML, CSS
- ***Interests*** Skiing, trail running, camping, board games, photography

Experience

Reveal **August 2023-Present**
Lead Engineer *Remote*

- Led the complete migration of a 200k-line codebase from Backbone to React over 5 years.
- Optimized webpack to speed up production deploys by 25%.
- Facilitated internationalization and expansion of app into 3 different regions.

Logikcull (Acquired) **August 2019-August 2023**
Lead Frontend Engineer *Remote*

- Developed core features of SaaS application, including audio redactions that drove a seven-figure ARR increase.
- Spearheaded an initiative that reduced production bugs by 15x through improved error monitoring.
- Accelerated end-to-end test suite speed by 5x, migrating from Selenium to Cypress to Playwright, cutting test time from 12 minutes to ~2.5 minutes.
- Made key page 45% faster by adjusting network waterfall.
- Mentored team members on React best practices.
- Directed the creation and maintenance of a shared component library using Storybook, streamlining collaboration between development and design teams.
- Introduced code-splitting, reducing the main JavaScript bundle size by 40%.

Threat Stack **August 2018 - April 2019**
Software Engineer *Boston, MA*

- Engineered high volume (~500k events / second) distributed system to replace old core event pipeline. This was written in Scala, Akka, and Kafka, replacing a node.js project.
- Built endpoints for public-facing API, while improving performance and documentation.

ERT **July 2017 – August 2018**
Software Engineer *Boston, MA*

- Developed modern, data-intensive web dashboards using Angular 5+, Typescript, and D3.
- Designed RESTful APIs using Node.js and Express.
- Managed company DevOps infrastructure, including AWS EC2, Beanstalk, and SQS.

Pirashield (Acquired) **June 2016 – July 2018**
Leader Engineer & Co-Founder *Boston, MA*

- Co-founded a MassChallenge-backed startup, driving it from inception through acquisition.
- Architected the company’s core product—a piracy detection engine processing millions of web pages weekly using AWS cloud services (EC2, ECS, Beanstalk, etc).
- Created a custom Electron desktop application that tripled piracy review productivity.
- Led company's database switch from MongoDB to PostgreSQL, speeding up critical requests by 3x.
- Built interactive dashboards and data visualization tools for customer insights.

Freelance Software Engineer **June 2014 - August 2019**

- Delivered a full-stack security camera monitoring platform, integrating real-time image processing with a React dashboard and AWS infrastructure.
- Built SpecialNeedsMap.com, a financial planning SaaS application (6 figure ARR).
- Ranked in the top 5% of Upwork freelancers with a 100% job success rate.

Education

Bates College **May 2015**
BS Physics, Math minor | 3.7 GPA *Lewiston, ME*

- Served as a physics class tutor and laboratory teaching assistant.
- Co-founded a Cub Scout Pack for Somali immigrant families, mentoring children aged 6-10.
